Story

Date	02 November 2026
Team ID	NA
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Story point 1 – EV Specs & Sales overview:** The dashboard with the six headline specifications and the three filters.
- **Story point 2 – Who buys EVs and where they are built:** Family and city use cases lead sales; India and China lead manufacturing.
- **Story point 3 – Price, performance and drivetrain:** Buses and trucks cost the most, Sports Cars are the fastest, and AWD gives about 55 km more range.

Activity 2:

Publish Story on Tableau Public and Paste Public link below
